

**PERMISSION TO DISTRIBUTE TRANSCRIPT DATA  
THROUGH TALKBANK  
Carnegie Mellon University**

Carnegie Mellon University is participating in a data-sharing program known as TalkBank that was established through federal and foundation grants to Brian MacWhinney at Carnegie Mellon. For the program to function properly, contributors will be asked to and will give permission for their work to be made available to other researchers. With a full understanding of the aforementioned, I hereby give permission to TalkBank to make and circulate electronic copies of the language transcripts and media that I describe below. These copies may be distributed to scholars and other responsible parties. I warrant that this use of the data is in accord with Human Subjects review procedures at my institution and that participants have given informed consent to have their data available to researchers. I also warrant that there is no copyright restriction over the transcripts and media being circulated. Any further restrictions that I wish to place on the use of these data are listed under (2) below. I do not hold Brian MacWhinney or Carnegie Mellon responsible for the enforcement of these further restrictions and indemnify and render harmless both Brian MacWhinney and Carnegie Mellon University against any actions at law or in equity or in similar courts of any jurisdictions arising from violations of these restrictions.

1. General description of the data set, and IRB Approval # (if available):

Name of the data set : French-Yamaguchi

The recordings were part of the Leonard and Colaje projects coordinated by Prof. Aliyah Morgenstern.

The participant in these projects was recorded in his home in a naturalistic setting, for one hour every month. Adrien was recorded by the author, who is also a friend of the child's family.

During the recordings the child typically looked at picture books and played with toys with one of his parents, and sometimes bathing times were recorded; there were no instructions given as to word elicitation to the parents.

The video recordings were made using a Sony HDV 1080i/mini DV camera, and the audio recordings were made using a wireless microphone (Sennheiser, EW 112-p G2) worn by the child. The tapes were digitized using iMovie.

This corpus was originally segmented and transcribed with PHON. The phonetic transcription (IPA Actual) was double-checked as for 4.5% of the total data, and the agreement percentage for consonants reached 95.5%.

2. Restrictions to be placed on the use of the data:

In accordance with CHILDES rules, any use of data from this corpus must be accompanied by the reference below:
